ABOUT ANTSLE, INC. (San Diego, USA)

antsle developed a private cloud server, built for developers. antsle's mission is to preserve the advantages of cloud computing, while liberating users from its downsides. The vision is to have antsles in every home that host exciting apps, augmenting and partially replacing the large-scale datacenter. A huge number of cooperating, social and hard-working antsles are challenging the dominating status of a few dinosaurs.

antsle sells state-of-the-art technology on both the hardware and software side, like OS-virtualization, an innovative case that is 100% silent, and a simple and secure antsle OS management system. Add-ons like domains, SSL certificates and backup services are also on offer.
